WHAT IS THE DESIGN PROCESS?

HERE'S HOW IT WORKS:

Consultation & Design Development

Schedule a design consultation. We'll discuss your goals, preferred aesthetic, design inspirations, and desired timeline. Ask questions. Share, we're listening. During our meeting you'll determine if the project is a good fit.

Onsite we'll gather all the tradesmen together. They will create the estimates outlining the scope of their work and costs.

We'll create a Project proposal – the project scope, design fees, retainer, and terms and conditions. Once the proposal is signed and project commitment collected we will get started.

The design development stage is where the fun begins. We develop a design concept for your approval complete with space planning, renderings, elevations, color schemes, and finishes.

Client Proposal

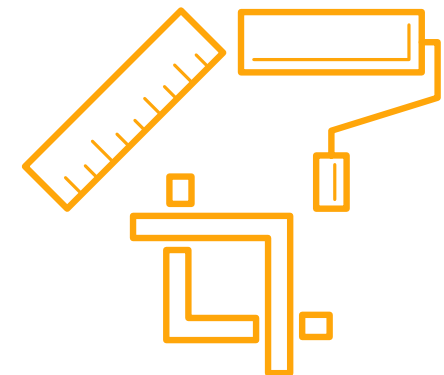

A full design presentation will include all renderings, color schemes, finishes and a full estimate breaking down all costs. If revisions are requested, a second presentation meeting will showcase any changes and adjustments.

Implementation & Installation

Now we roll up our sleeves and start implementation. During this phase we coordinate with vendors, tradesmen, contractors, and service providers.

We source all your products from construction materials, furnishings, to artwork and accessories. We provide full project management to ensure the project comes in on-time and on-budget.

The excitement builds as your installation begins. Window treatments, lighting, furniture, artwork, and accent pieces are perfectly staged for your enjoyment.
